Telemedicine Consultation

Internal Medicine Telemedicine Service

- ✓ Provide a full review of the medical records
- ✓ Aid in diagnostic workup recommendations
- ✓ Support you in the creation of treatment plans
- ✓ Remain a reliable point of contact for follow-up and continued collaboration on patient management.

Conditions Telemedicine Supports

Anemia and Other Hematologic Disorders:

for interpreting CBCs, bone marrow results, or guiding treatment trials.

Chronic Kidney Disease (CKD):

for ongoing monitoring, diet/lab reviews, and medication management.

Cushing's Disease (Hyperadrenocorticism):

for ACTH stimulation test reviews, medication titration, and symptom tracking.

Diabetes Mellitus:

for glucose curve interpretation, insulin adjustments, and owner education.

Endocrine Disorders (e.g., Addison's Disease):

for ongoing electrolyte monitoring and DOCP or prednisone titration.

Hypothyroidism / Hyperthyroidism:

for thyroid hormone level monitoring and treatment modifications.

Inflammatory Bowel Disease (IBD):

for managing long-term GI cases, diet changes, and treatment response.

Liver Disease (chronic hepatitis, elevated liver enzymes):

for diagnostics review, follow-up lab monitoring, and treatment updates.

Pancreatitis (chronic or recurrent):

for discussing supportive care plans and long-term management strategies.

Respiratory Disease (e.g., feline asthma, chronic bronchitis):

for long-term case management and medication changes.
